1 Posters P-2: Calculating similarity between texts using graph-based text representation model   ☐
Junji Tomita, Hidekazu Nakawatase, Megumi Ishii
November 2004 **Proceedings of the thirteenth ACM international conference on Information and knowledge management CIKM '04**
Publisher: ACM Press
Full text available: 🗎 pdf(82.79 KB)   Additional Information: full citation, abstract, references, index terms

Knowledge discovery from a large volumes of texts usually requires many complex analysis steps. The graph-based text representation model has been proposed to simplify the steps. The model represents texts in a formal manner, Subject Graphs, and provides text handling operations whose inputs and outputs are identical in form, i.e. a set of subject graphs, so they can be combined in any order. A subject graph uses node weight to represent the significance of each term, and link weight to repre ...

Keywords: similarity calculation, subject graphs

2 Poster session: Parallelizing the buckshot algorithm for efficient document clustering   ☐
Eric C. Jensen, Steven M. Beitzel, Angelo J. Pilotto, Nazli Goharian, Ophir Frieder
November 2002 **Proceedings of the eleventh international conference on Information and knowledge management CIKM '02**
Publisher: ACM Press
Full text available: 🗎 pdf(86.54 KB)   Additional Information: full citation, abstract, references, citings

We present a parallel implementation of the Buckshot document clustering algorithm. We demonstrate that this parallel approach is highly efficient both in terms of load balancing and minimization of communication. In a series of experiments using the 2GB of SGML data from TReC disks 4 and 5, our parallel approach was shown to be scalable in terms of processors efficiently used and the number of clusters created.

3 The automatic generation of extended queries   ☐
C. J. Crouch, D. B. Crouch, K. R. Nareddy
December 1989 **Proceedings of the 13th annual international ACM SIGIR conference on Research and development in information retrieval SIGIR '90**
Publisher: ACM Press

Full text available: 📄 pdf(1.09 MB)   Additional Information: full citation, abstract, references, citings, index terms

In the extended vector space model, each document vector consists of a set of subvectors representing the multiple concepts or concept classes present in the document. Typical information concepts, in addition to the usual content terms or descriptors, include author names, bibliographic links, etc. The extended vector space model is known to improve retrieval effectiveness. However, a major impediment to the use of the extended model is the construction of an extended quer ...

4 Latent semantic space: iterative scaling improves precision of inter-document
   similarity measurement
   Rie Kubota Ando
   July 2000 **Proceedings of the 23rd annual international ACM SIGIR conference on Research and development in information retrieval SIGIR '00**
   Publisher: ACM Press

   Full text available: 📄 pdf(903.29 KB)   Additional Information: full citation, abstract, references, citings, index terms

We present a novel algorithm that creates document vectors with reduced dimensionality. This work was motivated by an application characterizing relationships among documents in a collection. Our algorithm yielded inter-document similarities with an *average precision* up to 17.8% higher than that of singular value decomposition (SVD) used for Latent Semantic Indexing. The best performance was achieved with dimensional reduction rates that were 43% higher than SVD on average. Our algorit ...

Knowledge discovery from a large volumes of texts usually requires many complex analysis steps. The graph-based text representation model has been proposed to simplify the steps. The model represents texts in a formal manner, Subject Graphs, and provides text handling operations whose inputs and outputs are identical in form, i.e. a set of subject graphs, so they can be combined in any order. A subject graph uses node weight to represent the significance of each term, and link weight to repre ...

Keywords: similarity calculation, subject graphs

2 **Poster session: Parallelizing the buckshot algorithm for efficient document clustering** ☐
Eric C. Jensen, Steven M. Beitzel, Angelo J. Pilotto, Nazli Goharian, Ophir Frieder
November 2002 **Proceedings of the eleventh international conference on Information and knowledge management CIKM '02**
Publisher: ACM Press
Full text available: 📄 pdf(86.54 KB)   Additional Information: full citation, abstract, references, citings

We present a parallel implementation of the Buckshot document clustering algorithm. We demonstrate that this parallel approach is highly efficient both in terms of load balancing and minimization of communication. In a series of experiments using the 2GB of SGML data from TReC disks 4 and 5, our parallel approach was shown to be scalable in terms of processors efficiently used and the number of clusters created.

3 **The automatic generation of extended queries** ☐
C. J. Crouch, D. B. Crouch, K. R. Nareddy
December 1989 **Proceedings of the 13th annual international ACM SIGIR conference on Research and development in information retrieval SIGIR '90**
Publisher: ACM Press

Full text available: 📄 pdf(1.09 MB)   Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index terms</u>

In the extended vector space model, each document vector consists of a set of subvectors representing the multiple concepts or concept classes present in the document. Typical information concepts, in addition to the usual content terms or descriptors, include author names, bibliographic links, etc. The extended vector space model is known to improve retrieval effectiveness. However, a major impediment to the use of the extended model is the construction of an extended quer ...

4 <u>Latent semantic space: iterative scaling improves precision of inter-document similarity measurement</u>   ☐

Rie Kubota Ando

July 2000   **Proceedings of the 23rd annual international ACM SIGIR conference on Research and development in information retrieval SIGIR '00**

Publisher: ACM.Press

Full text available: 📄 pdf(903.29 KB)   Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index terms</u>

We present a novel algorithm that creates document vectors with reduced dimensionality. This work was motivated by an application characterizing relationships among documents in a collection. Our algorithm yielded inter-document similarities with an *average precision* up to 17.8% higher than that of singular value decomposition (SVD) used for Latent Semantic Indexing. The best performance was achieved with dimensional reduction rates that were 43% higher than SVD on average. Our algorit ...

1 Special issue on ICML: Coupled clustering: a method for detecting structural correspondence ☐
Zvika Marx, Ido Dagan, Joachim M. Buhmann, Eli Shamir
March 2003 **The Journal of Machine Learning Research**, Volume 3
Publisher: MIT Press
Full text available: 📄 pdf(967.15 KB)   Additional Information: full citation, abstract, citings, index terms

> This paper proposes a new paradigm and a computational framework for revealing equivalencies (analogies) between sub-structures of distinct composite systems that are initially represented by unstructured data sets. For this purpose, we introduce and investigate a variant of traditional data clustering, termed *coupled clustering*, which outputs a configuration of corresponding subsets of two such representative sets. We apply our method to synthetic as well as textual data. Its achievement ...

2 Scaling distributional similarity to large corpora ☐
James Gorman, James R. Curran
July 2006 **Proceedings of the 21st International Conference on Computational Linguistics and the 44th annual meeting of the ACL ACL '06**
Publisher: Association for Computational Linguistics
Full text available: 📄 pdf(163.22 KB)   Additional Information: full citation, abstract, references

> Accurately representing synonymy using distributional similarity requires large volumes of data to reliably represent infrequent words. However, the naïve nearest-neighbour approach to comparing context vectors extracted from large corpora scales poorly ($O(n^2)$ in the vocabulary size).In this paper, we compare several existing approaches to approximating the nearest-neighbour search for distributional similarity. We investigate the trade-off between efficiency and ac ...

3 Probabilistic latent semantic indexing ☐
Thomas Hofmann
August 1999 **Proceedings of the 22nd annual international ACM SIGIR conference on Research and development in information retrieval SIGIR '99**

4   DASMAS: dialogue based automation of semantic interoperability in multi agent
    systems
    Bhavna Orgun, Mark Dras, Steve Cassidy, Abhaya Nayak
    November 2005 **Proceedings of the 2005 Australasian Ontology Workshop - Volume
                  58 AOW '05**
    Publisher: Australian Computer Society, Inc.
    Full text available: 📄 pdf(111.46 KB)   Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>index terms</u>

    This paper presents our ongoing effort on developing a dialogue based framework for
    resolving semantic interoperability in multi agent systems. Our approach is characterized
    by: (1) multi agent systems that have real world heterogeneous ontologies; (2) the
    resolution of semantic differences at run-time through an adapted ontology negotiation
    protocol (ONP); and (3) the use of the Word Net lexicon in the resolution process.

    Keywords: interoperability, multi agent systems, ontology

5   Semantic-based resource discovery, retrieval and composition (RDRC): Efficient
    query routing for information retrieval in semantic overlays
    Hai Jin, Xiaomin Ning, Hanhua Chen, Zuoning Yin
    April 2006 **Proceedings of the 2006 ACM symposium on Applied computing SAC '06**
    Publisher: ACM Press
    Full text available: 📄 pdf(167.04 KB)   Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>index terms</u>

    A fundamental problem in peer-to-peer networks is how to locate appropriate peers
    efficiently to answer a specific query request. This paper proposes a model in which
    semantically similar peers form a semantic overlay network and a query can be routed or
    forwarded to appropriate peers instead of broadcasting or random selection. We apply
    Latent Semantic Indexing (LSI) in information retrieval to reveal semantic subspaces of
    feature spaces from documents stored on peers. After producing se ...

    Keywords: information retrieval, query routing, semantic overlay

6   F3MCNN: a fuzzy minimum mean maximum clustering neural network
    Liangtsan G. Wu, Huizhu Lu
    March 2000 **Proceedings of the 2000 ACM symposium on Applied computing - Volume
               1 SAC '00**
    Publisher: ACM Press
    Full text available: 📄 pdf(399.52 KB)   Additional Information: <u>full citation</u>, <u>references</u>, <u>index terms</u>

    Keywords: ART, F3MCNN, clustering, fuzzy logic, neural network

7   Incorporating contextual information in recommender systems using a
    multidimensional approach
    Gediminas Adomavicius, Ramesh Sankaranarayanan, Shahana Sen, Alexander Tuzhilin
    January 2005 **ACM Transactions on Information Systems (TOIS)**, Volume 23 Issue 1
    Publisher: ACM Press
    Full text available: 📄 pdf(423.91 KB)   Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index terms</u>

    The article presents a multidimensional (MD) approach to recommender systems that can
    provide recommendations based on additional contextual information besides the typical
    information on users and items used in most of the current recommender systems. This

approach supports multiple dimensions, profiling information, and hierarchical aggregation of recommendations. The article also presents a multidimensional rating estimation method capable of selecting two-dimensional segments of ratings pert ...

Keywords: Recommender systems, collaborative filtering, context-aware recommender systems, multidimensional data models, multidimensional recommender systems, personalization, rating estimation

8 DB-4 (databases): similarity search: Distance-function design and fusion for sequence data
Yi Wu, Edward Y. Chang
November 2004 **Proceedings of the thirteenth ACM international conference on Information and knowledge management CIKM '04**
Publisher: ACM Press
Full text available: pdf(183.71 KB)   Additional Information: full citation, abstract, references, citings, index terms

Sequence-data mining plays a key role in many scientific studies and real-world applications such as bioinformatics, data stream, and sensor networks, where sequence data are processed and their semantics interpreted. In this paper we address two relevant issues: sequence-data representation, and representation-to-semantics mapping. For representation, since the best one is dependent upon the application being used and even the type of query, we propose representing sequence data in multiple ...
